

Integrating With Jabra

Evolve2 85

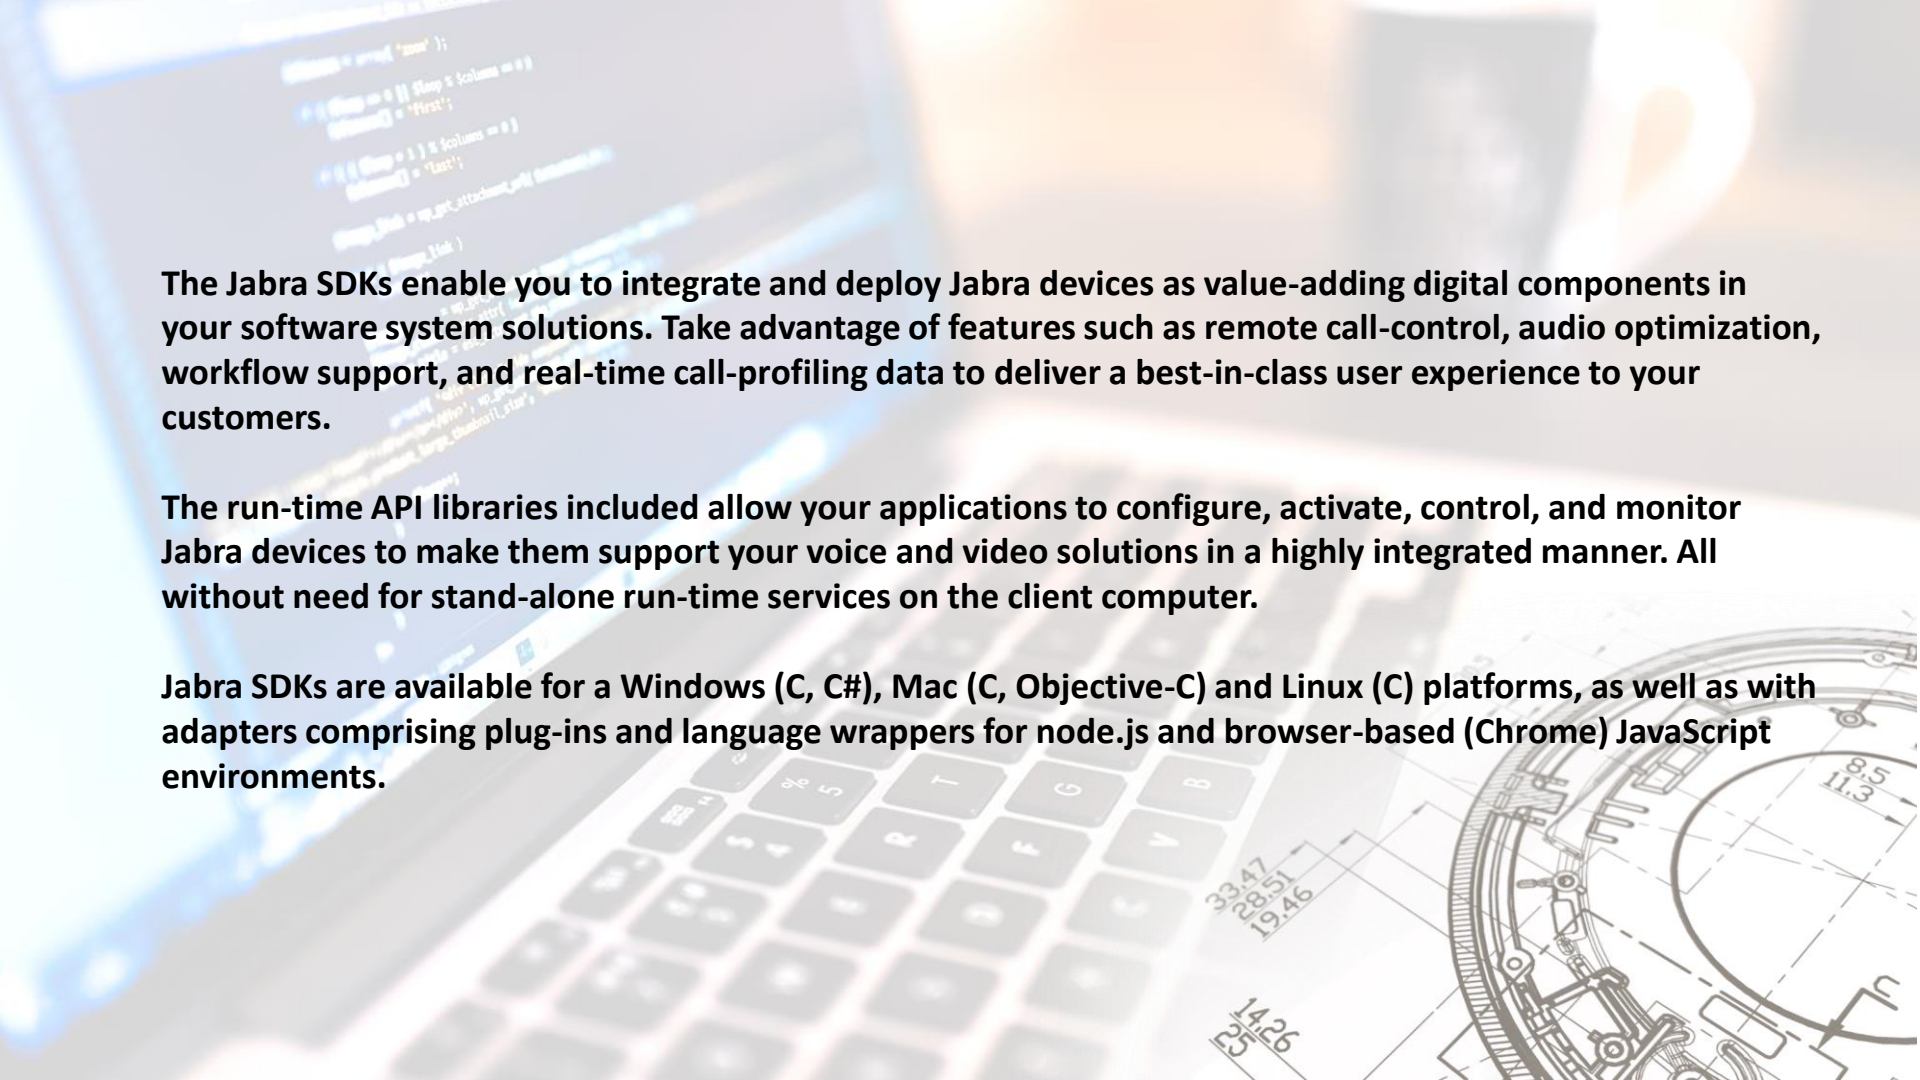

Evolve2 65

Evolve2 40

The Jabra SDKs enable you to integrate and deploy Jabra devices as value-adding digital components in your software system solutions. Take advantage of features such as remote call-control, audio optimization, workflow support, and real-time call-profiling data to deliver a best-in-class user experience to your customers.

The run-time API libraries included allow your applications to configure, activate, control, and monitor Jabra devices to make them support your voice and video solutions in a highly integrated manner. All without need for stand-alone run-time services on the client computer.

Jabra SDKs are available for a Windows (C, C#), Mac (C, Objective-C) and Linux (C) platforms, as well as with adapters comprising plug-ins and language wrappers for node.js and browser-based (Chrome) JavaScript environments.

There are 4 integration methods to utilize Jabra technology in your solutions:

- 1) Audio Only : no integration required (buttons don't control calls)**
- 2) SDK Lite : basic call control, open source**
- 3) Full SDK : call control, configuration and analytics, Jabra provided**
- 4) USB HID : call control, configuration (Jabra Solution Providers only)**
